Limerick, Ireland June 20 - 22, 2018

The **Five laws of library science**^{*} is a theory proposed by S. R. Ranganathan in 1931, detailing the principles of operating a library system. Many librarians worldwide accept them as the foundations of their philosophy.

These laws are:

Books are for use. Every reader their book. Every book its reader. Save the time of the reader. The library is a growing organism.

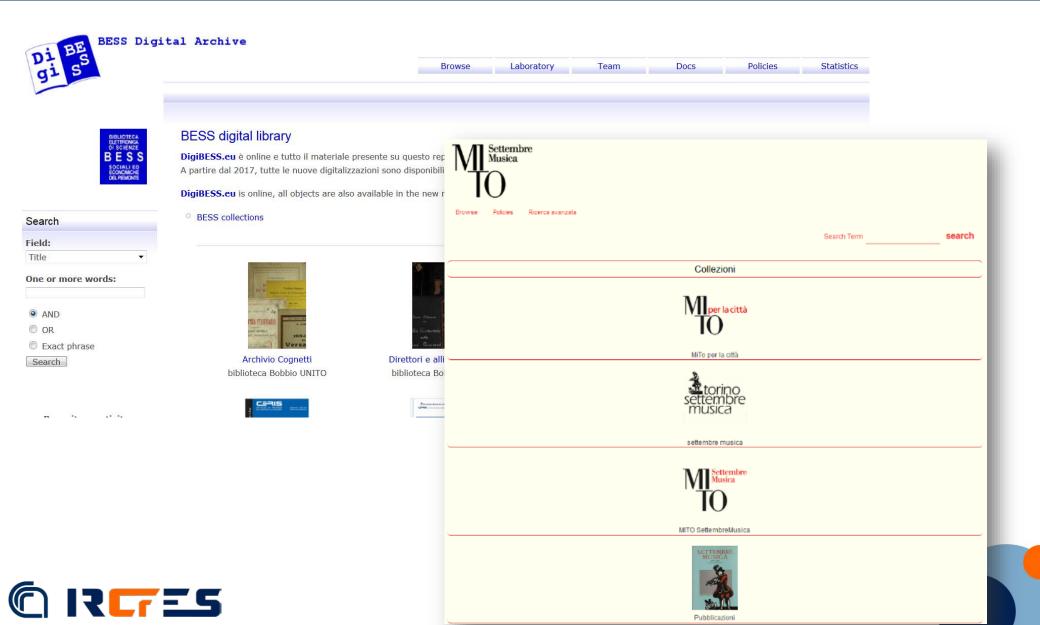

We can apply these laws to a repository?

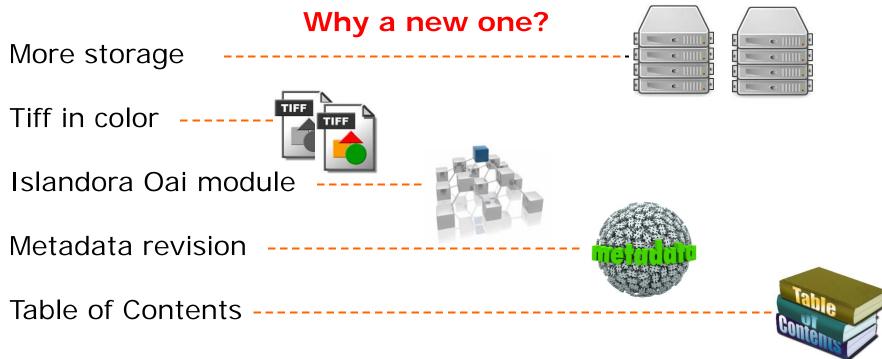

^{*} From Wikipedia (<u>https://en.wikipedia.org/wiki/Five laws of library science</u>)

Byterfly - new ingesting in a new repository

Some from islandora 6 and some from backup

Work done with custom script Book batch ingesting module CRUD module (thanks Mark Jordan!)

Search results to do

Exhibit to do

We can apply these laws to a repository?

Books are for use: put the books in an accessible and reachable place online Every reader their book: The material is now very patchy, but we consider it an asset Every book its reader: each item has an individual or individuals who would find that item useful Save the time of the reader: creating new ways to navigate through the repository by simplifying search function and multiplying access to the resources The library is a growing organism: more than 1.000.000 pages

YES TO BYTERFLY!

DigiBESS reloaded and some other stories
