**Summary:** A "just transition" refers to a socio-economic concept aimed at ensuring that the shift towards more sustainable and environmentally friendly practices, such as those related to resource extraction, doesn't leave certain communities or groups behind. This term is particularly relevant in areas where raw materials are extracted, as these industries often undergo significant changes due to shifts in market demand, technological advancements, or environmental regulations.

This Topical Collection will deal with a sustainable and just environmental transition, seeking to reconcile the imperative of transition towards a more sustainable economy with the need to protect the rights and well-being of those affected by the shift, particularly in communities where raw materials are extracted. By addressing social, economic, and environmental concerns in an integrated manner, it will support papers aiming to build a more resilient and equitable society for all.

**Keywords:** just transition; sustainability; social sustainability; cultural survival; Indigenous Peoples; cosmovision; pollution; critical raw materials.
